GRADE 6

Open-Ended Problem Solving Projections

Organized by TEKS Categories
OVERVIEW

The Projection Masters for Problem-Solving were created with all students in mind and provide teachers with large print projections for problem-solving questions that address all TEKS. Each Projection Master is correlated to a specific Category and TEKS.

The Projection Masters for Problem-Solving document includes a general set of questions that should be addressed by students as they solve the problems and during class discussions of the solution process for each problem. Teachers should make a copy of these questions and distribute for each student to keep in his/her math notebook.

The Problem-Solving Questions include the following:
1. What is the main idea of this problem?
2. What are the supporting details in this problem?
3. What skills, concepts, and understanding of math vocabulary are needed to be able to answer this question?
4. Did this problem involve mathematics arising in everyday life, society, or the work place?
5. What is a good problem-solving strategy for this problem?
6. Can you explain how you used any math tools, mental math, estimation, or number sense to solve this problem?
7. Did this problem involve using multiple representations (symbols, diagrams, graphs, language)?
8. Did you use any relationships to solve this problem?
9. How can you justify your solution?
10. How can you check for reasonableness of your solution to this problem?

These Projection masters can be utilized for instruction, guided practice or independent practice. These materials can be utilized with a whole class, small groups, and/or tutorial settings.

NOTE: There is no answer key provided for the Projection Masters or Problem-Solving as the authors’ philosophy is that each teacher should create a personalized Solutions Manual so the teacher becomes more familiar with the Revised TEKS and assessment of the Revised TEKS, as well as formulates various solution strategies for each question. Teachers are encouraged to communicate with the authors regarding discussion of any questioning this document.

AUTHORS’ VISION FOR IMPLEMENTATION

Students work with a partner pair to answer the open-ended problems. The teacher projects the problem then sets a time limit prior to students beginning their work. Partner pairs are given specific “share” questions from the 1-10 on the Problem-solving Questions page. The process should be followed by students for all open-ended questions is to answer questions 1-3, then complete the solution to the problem, and then finally answer questions 4-10.

The teacher calls time and the partner pairs guide the class discussion on their “share” assignments. Students who did not complete the solution to the problem prior to the time limit must complete recording in a different color.
### Mathematical Process Standards

These student expectations will not be listed separately. They will be incorporated into assessments for TEKS in other categories since the application of mathematical process standards is part of each knowledge statement for all other TEKS.

#### 6.(1) Mathematical Process Standards

The student uses mathematical processes to acquire and demonstrate mathematical understanding.

<table>
<thead>
<tr>
<th>TEKS</th>
<th>STUDENT EXPECTATION</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>6.1(A)</strong></td>
<td>apply mathematics to problems arising in everyday life, society, and the workplace</td>
</tr>
<tr>
<td><strong>6.1(B)</strong></td>
<td>use a problem-solving model that incorporates analyzing given information, formulating a plan or strategy, determining a solution, justifying the solution, and evaluating the problem-solving process and the reasonableness of the solution</td>
</tr>
<tr>
<td><strong>6.1(C)</strong></td>
<td>select tools, including real objects, manipulatives, paper and pencil, and technology as appropriate, and techniques, including mental math, estimation, and number sense as appropriate, to solve problems</td>
</tr>
<tr>
<td><strong>6.1(D)</strong></td>
<td>communicate mathematical ideas, reasoning, and their implications using multiple representations, including symbols, diagrams, graphs, and language as appropriate</td>
</tr>
<tr>
<td><strong>6.1(E)</strong></td>
<td>create and use representations to organize, record, and communicate mathematical ideas</td>
</tr>
<tr>
<td><strong>6.1(F)</strong></td>
<td>analyze mathematical relationships to connect and communicate mathematical ideas</td>
</tr>
<tr>
<td><strong>6.1(G)</strong></td>
<td>display, explain, and justify mathematical ideas and arguments using precise mathematical language in written or oral communication</td>
</tr>
</tbody>
</table>
Category 1: Number and Operations

6.(2) Number and Operations
The student applies mathematical process standards to represent and use rational numbers in a variety of forms.

<table>
<thead>
<tr>
<th>STAAR Standard</th>
<th>TEKS</th>
<th>STUDENT EXPECTATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Supporting</td>
<td>6.2(A)</td>
<td>classify whole numbers, integers, and rational numbers using a visual representation such as a Venn diagram to describe relationships between sets of numbers</td>
</tr>
<tr>
<td>Supporting</td>
<td>6.2(B)</td>
<td>identify a number, its opposite, and its absolute value</td>
</tr>
<tr>
<td>Supporting</td>
<td>6.2(C)</td>
<td>locate, compare, and order integers and rational numbers using a number line</td>
</tr>
<tr>
<td>Readiness</td>
<td>6.2(D)</td>
<td>order a set of rational numbers arising from mathematical and real-world contexts</td>
</tr>
<tr>
<td>Supporting</td>
<td>6.2(E)</td>
<td>extend representations for division to include fraction notation such as ( \frac{a}{b} ) represents the same number as ( a \div b ) where ( b \neq 0 )</td>
</tr>
</tbody>
</table>

6.(3) Number and Operations
The student applies mathematical process standards to represent addition, subtraction, multiplication, and division while solving problems and justifying solutions.

<table>
<thead>
<tr>
<th>STAAR Standard</th>
<th>TEKS</th>
<th>STUDENT EXPECTATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Supporting</td>
<td>6.3(A)</td>
<td>recognize that dividing by a rational number and multiplying by its reciprocal result in equivalent values.</td>
</tr>
<tr>
<td>Supporting</td>
<td>6.3(B)</td>
<td>determine, with and without computation, whether a quantity is increased or decreased when multiplied by a fraction, including values greater than or less than one</td>
</tr>
<tr>
<td>Supporting</td>
<td>6.3(C)</td>
<td>represent integer operations with concrete models and connect the actions with the models to standardized algorithms</td>
</tr>
<tr>
<td>Readiness</td>
<td>6.3(D)</td>
<td>add, subtract, multiply, and divide integers fluently</td>
</tr>
<tr>
<td>Readiness</td>
<td>6.3(E)</td>
<td>multiply and divide positive rational numbers fluently</td>
</tr>
</tbody>
</table>
## Category 2: Proportionality

### 6.(4) Proportionality

The student applies mathematical process standards to develop an understanding of proportional relationships in problem situations.

<table>
<thead>
<tr>
<th>STAAR Standard</th>
<th>TEKS</th>
<th>STUDENT EXPECTATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Supporting</td>
<td>6.4(A)</td>
<td>compare two rules verbally, numerically, graphically, and symbolically in the form of $y = ax$ or $y = x + a$ in order to differentiate between additive and multiplicative relationships</td>
</tr>
<tr>
<td>Readiness</td>
<td>6.4(B)</td>
<td>apply qualitative and quantitative reasoning to solve prediction and comparison of real-world problems involving ratios and rates</td>
</tr>
<tr>
<td>Supporting</td>
<td>6.4(C)</td>
<td>give examples of ratios as multiplicative comparisons of two quantities describing the same attribute.</td>
</tr>
<tr>
<td>Supporting</td>
<td>6.4(D)</td>
<td>give examples of rates as the comparison by division of two quantities having different attributes, including rates as quotients</td>
</tr>
<tr>
<td>Readiness</td>
<td>6.4(E)</td>
<td>represent ratios and percents with concrete models, fractions, and decimals.</td>
</tr>
<tr>
<td>Supporting</td>
<td>6.4(F)</td>
<td>represent benchmark fractions and percents such as 1%, 10%, 25%, 33 1/3%, and multiples of these values using 10 by 10 grids, strip diagrams, number lines, and numbers</td>
</tr>
<tr>
<td>Readiness</td>
<td>6.4(G)</td>
<td>generate equivalent forms of fractions, decimals, and percents using real-world problems, including problems that involve money</td>
</tr>
<tr>
<td>Readiness</td>
<td>6.4(H)</td>
<td>convert units within a measurement system, including the use of proportions and unit rates</td>
</tr>
</tbody>
</table>

### Proportionality

### 6.(5) Proportionality

The student applies mathematical process standards to solve problems involving proportional relationships.

<table>
<thead>
<tr>
<th>STAAR Standard</th>
<th>TEKS</th>
<th>STUDENT EXPECTATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Supporting</td>
<td>6.5(A)</td>
<td>represent mathematical and real-world problems involving ratios and rates using scale factors, tables, graphs, and proportions</td>
</tr>
<tr>
<td>Readiness</td>
<td>6.5(B)</td>
<td>solve real-world problems to find the whole given a part and the percent, to find the part given the whole and the percent, and to find the percent given the part and the whole, including the use of concrete and pictorial models</td>
</tr>
<tr>
<td>Supporting</td>
<td>6.5(C)</td>
<td>use equivalent fractions, decimals, and percents to show equal parts of the same whole</td>
</tr>
</tbody>
</table>
Category 3: Expressions, Equations, and Relationships

6.(6) Expressions, Equations, and Relationships
The student applies mathematical process standards to use multiple representations to describe algebraic relationships.

<table>
<thead>
<tr>
<th>STAAR Standard</th>
<th>TEKS</th>
<th>STUDENT EXPECTATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Supporting</td>
<td>6.6(A)</td>
<td>identify independent and dependent quantities from tables and graphs</td>
</tr>
<tr>
<td>Supporting</td>
<td>6.6(B)</td>
<td>write an equation that represents the relationship between independent and dependent quantities from a table</td>
</tr>
<tr>
<td>Readiness</td>
<td>6.6(C)</td>
<td>represent a given situation using verbal descriptions, tables, graphs, and equations in the form $y = kx$ or $y = x + b$</td>
</tr>
</tbody>
</table>

Expressions, Equations, and Relationships

6.(7) Expressions, Equations, and Relationships
The student applies mathematical process standards to develop concepts of expressions and equations.

<table>
<thead>
<tr>
<th>STAAR Standard</th>
<th>TEKS</th>
<th>STUDENT EXPECTATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Supporting</td>
<td>6.7(A)</td>
<td>generate equivalent numerical expressions using order of operations, including whole number exponents and prime factorization</td>
</tr>
<tr>
<td>Readiness</td>
<td>6.7(B)</td>
<td>distinguish between expressions and equations verbally, numerically, and algebraically</td>
</tr>
<tr>
<td>Supporting</td>
<td>6.7(C)</td>
<td>determine if two expressions are equivalent using concrete models, pictorial models, and algebraic representations</td>
</tr>
<tr>
<td>Supporting</td>
<td>6.7(D)</td>
<td>generate equivalent expressions using the properties of operations: inverse, identity, commutative, associative, and distributive properties</td>
</tr>
</tbody>
</table>

Expressions, Equations, and Relationships

6.(8) Expressions, Equations, and Relationships
The student applies mathematical process standards to use geometry to represent relationships and solve problems.

<table>
<thead>
<tr>
<th>STAAR Standard</th>
<th>TEKS</th>
<th>STUDENT EXPECTATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Supporting</td>
<td>6.8(A)</td>
<td>extend previous knowledge of triangles and their properties to include the sum of angles of a triangle, the relationship between the lengths of sides and measures of angles in a triangle, and determining when three lengths form a triangle</td>
</tr>
<tr>
<td>Supporting</td>
<td>6.8(B)</td>
<td>model area formulas for parallelograms, trapezoids, and triangles by decomposing and rearranging parts of these shapes</td>
</tr>
<tr>
<td>Supporting</td>
<td>6.8(C)</td>
<td>write equations that represent problems related to the area of rectangles, parallelograms, trapezoids, and triangles and volume of right rectangular prisms where dimensions are positive rational numbers</td>
</tr>
<tr>
<td>Readiness</td>
<td>6.8(D)</td>
<td>determine solutions for problems involving the area of rectangles, parallelograms, trapezoids, and triangles and volume of right rectangular prisms where dimensions are positive rational numbers</td>
</tr>
</tbody>
</table>
## Category 3: Expressions, Equations, and Relationships

### 6.(9) Expressions, Equations, and Relationships
The student applies mathematical process standards to use equations and inequalities to represent situations.

<table>
<thead>
<tr>
<th>STAAR Standard</th>
<th>TEKS</th>
<th>STUDENT EXPECTATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Supporting</td>
<td>6.9(A)</td>
<td>write one-variable, one-step equations and inequalities to represent constraints or conditions within the problem</td>
</tr>
<tr>
<td>Supporting</td>
<td>6.9(B)</td>
<td>represent solutions for one-variable, one-step equations and inequalities on number lines</td>
</tr>
<tr>
<td>Supporting</td>
<td>6.9(C)</td>
<td>write corresponding real-world problems given one-variable, one-step equations or inequalities</td>
</tr>
</tbody>
</table>

### Expressions, Equations, and Relationships
The student applies mathematical process standards to use equations and inequalities to solve problems.

<table>
<thead>
<tr>
<th>STAAR Standard</th>
<th>TEKS</th>
<th>STUDENT EXPECTATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Readiness</td>
<td>6.10(A)</td>
<td>model and solve one-variable, one-step equations and inequalities that represent problems, including geometric concepts</td>
</tr>
<tr>
<td>Supporting</td>
<td>6.10(B)</td>
<td>determine if the given value(s) make(s) one-variable, one-step equations or inequalities true</td>
</tr>
</tbody>
</table>
## Category 4: Measurement and Data

### 6.(11) Measurement and Data
The student applies mathematical process standards to use coordinate geometry to identify locations on a plane.

<table>
<thead>
<tr>
<th>STAAR Standard</th>
<th>TEKS</th>
<th>STUDENT EXPECTATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Readiness</td>
<td>6.11(A)</td>
<td>Graph points in all four quadrants using ordered pairs of rational numbers</td>
</tr>
</tbody>
</table>

### Measurement and Data

### 6.(12) Measurement and Data
The student applies mathematical process standards to use numerical or graphical representations to analyze problems.

<table>
<thead>
<tr>
<th>STAAR Standard</th>
<th>TEKS</th>
<th>STUDENT EXPECTATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Supporting</td>
<td>6.12(A)</td>
<td>represent numeric data graphically, including dot plots, stem-and-leaf plots, histograms, and box plots</td>
</tr>
<tr>
<td>Supporting</td>
<td>6.12(B)</td>
<td>use the graphical representation of numeric data to describe the center, spread and the shape of the data distribution</td>
</tr>
<tr>
<td>Readiness</td>
<td>6.12(C)</td>
<td>summarize numeric data with numerical summaries, including the mean and median (measures of center) and the range and interquartile range (IQR) (measures of spread) and use these summaries to describe the center, spread, and shape of data distribution</td>
</tr>
<tr>
<td>Readiness</td>
<td>6.12(D)</td>
<td>summarize categorical data with numerical and graphical summaries, including the mode, the percent of values in each category (relative frequency table), and the percent bar graph, and use these summaries to describe the data distribution</td>
</tr>
</tbody>
</table>

### Measurement and Data

### 6.(13) Measurement and Data
The student applies mathematical process standards to use numerical or graphical representations to solve problems.

<table>
<thead>
<tr>
<th>STAAR Standard</th>
<th>TEKS</th>
<th>STUDENT EXPECTATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Readiness</td>
<td>6.13(A)</td>
<td>interpret numeric data summarized in dot plots, stem-and-leaf plots, histograms and box plots</td>
</tr>
<tr>
<td>Supporting</td>
<td>6.13(B)</td>
<td>distinguish between situations that yield data with and without variability</td>
</tr>
</tbody>
</table>
## Category 5: Personal Financial Literacy

### 6.(14) Personal Financial Literacy
The student applies mathematical processes standards to develop an economic way of thinking and problem solving useful in one’s life as a knowledgeable consumer and investor.

<table>
<thead>
<tr>
<th>STAAR Standard</th>
<th>TEKS</th>
<th>STUDENT EXPECTATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Supporting</td>
<td>6.14(A)</td>
<td>compare the features and costs of a checking account and a debit card offered by different local financial institutions</td>
</tr>
<tr>
<td>Supporting</td>
<td>6.14(B)</td>
<td>distinguish between debit cards and credit cards</td>
</tr>
<tr>
<td>Supporting</td>
<td>6.14(C)</td>
<td>balance a check register that includes deposits, withdrawals, and transfers</td>
</tr>
<tr>
<td>Not Tested</td>
<td>6.14(D)</td>
<td>explain why it is important to establish a positive credit history</td>
</tr>
<tr>
<td>Supporting</td>
<td>6.14(E)</td>
<td>describe the information in a credit report and how long it is retained</td>
</tr>
<tr>
<td>Supporting</td>
<td>6.14(F)</td>
<td>describe the value of credit reports to borrowers and to lenders</td>
</tr>
<tr>
<td>Supporting</td>
<td>6.14(G)</td>
<td>explain various methods to pay for college, including through savings, grants, scholarships, student loans, and work-study</td>
</tr>
<tr>
<td>Supporting</td>
<td>6.14(H)</td>
<td>compare the annual salary of several occupations requiring various levels of post-secondary education or vocational training and calculate the effects of the different annual salaries on lifetime income</td>
</tr>

**Problem 1:** Find the following products.

\[
\frac{3}{8} \times 32 = \quad 10\frac{1}{2} \times 7\frac{1}{3} = \quad 18 \times 0.4 = \quad 0.5 \times 1.3
\]

If you are multiplying two fractions do you need a common denominator? Explain your answer.

Explain how to determine the position of the decimal point in the product of two decimals?

**Problem 2:** Mikel’s test had 40 questions. Each question was worth 2.5 points. Mikel answered only \( \frac{9}{10} \) of the questions and she missed \( \frac{1}{9} \) of those she answered. What was Mikel’s score on the test? Show your work.
Problem 1: Find the following quotients.

\[ 48 ÷ \frac{8}{3} = \quad 10 \frac{1}{2} ÷ 3 \frac{1}{2} = \quad 104 ÷ 0.4 = \quad 0.5 \times 1.3 \]

If you are dividing two fractions do you need a common denominator? Explain your answer.

Explain how to determine the position of the decimal point in the quotient of two decimals?

Problem 2: The Smyth family purchased a large screen television for their den. The television cost a total of $1440. If they pay for the television in 24 months or less they do not have to pay interest on the purchase. What will be the payments if they pay for the television in 24 equal payments?

**Problem 1:** There were 36 teams and 144 golfers registered for a golf tournament. Complete the following statements concerning this situation.

The number of teams is _________ times the number of golfers registered for a golf tournament.

The number of golfers is _________ times the number of teams registered for a golf tournament.

**Problem 2:** In a large box of chocolate chip cookies and sugar cookies, the ratio of the number of chocolate chip to the number of sugar cookies is 3:4. Complete the following statements concerning this situation.

The number of chocolate chip cookies is _________ times the number of sugar cookies in the box.

The number of sugar cookies is _________ times the number of chocolate chip cookies in the box.

**Problem 3:** In a bag of marbles, there are 30 red, 20 blue, 40 green, and 10 white marbles. Complete the following statements concerning this situation.

The number of white marbles is _________ times the number of blue marbles in the bag.

The number of red marbles is _________ times the number of white marbles in the bag.

The number of red marbles is _________ times the number of green marbles in the bag.
Problem 1: The number of boys in Mrs. Sims’ fifth period class is proportional to the number of girls in the class. The class of 30 students has 12 boys. Complete the following statement concerning the students in her class.

The number of girls in the class is ________ times the number of boys in the class.

Problem 2: Garza’s grocery sells a fruit basket that has 10 pieces of fruit and 4 of the pieces are oranges. Complete the following statement concerning the fruit basket.

The number of oranges in the fruit basket is ________ times the total number of pieces of fruit.

Problem 3: Joseph’s little brother has 6 stuffed bears and 4 stuffed dogs. Complete the following statement concerning his stuffed animals.

The number of stuffed bears Joseph’s little brother has is ________ times the number of stuffed dogs.

Problem 1: Select the situations below that yield data without variability.

How many student council members at Edison Middle School attended the meeting on Tuesday, March 1?

How many tickets were sold to see the new movie at the theatre?

How many sixth graders at Lee Middle School made the all A honor roll the first six weeks of the 2013-2014 school year?

How many students walk to school on Mondays?

Explain how you made your decision.

Problem 2: Select the situations below that yield data with variability.

How many students at Madison Middle School ride the bus to school?

How many students did Mrs. Berry teach piano lessons to on Saturday, March 3?

How many movies did sixth grade students watch?

What was the temperature on December 13, 2013, at 9:00 a.m. in Chicago?

What was the temperature on December 13 in Chicago?

Explain how you made your decision.
Problem 1: Select the situations below that yield data without variability.

How many students eat in the lunch room?

How many sixth grade students at Hobart Middle School brought their lunch from home on Tuesday, September 3, 2013?

What is the area of a rectangle with a length of 5 inches and a width of 2 inches?

What is the area of a rectangle with a length of 5 inches?

Explain how you made your decision.

Problem 2: Select the situations below that yield data with variability.

How many sixth grade students wore shorts to school?

If gasoline costs $3.10 a gallon, what is the cost of 5 gallons?

If gasoline costs $3.10 a gallon, what is the cost to fill a tank?

How many nickels are in $5?

How many dimes are in collection of 20 nickels and dimes?

Explain how you made your decision.
What are some things you must consider when deciding on a career?

Is salary the most important thing to consider? Why?

What type of benefits would you want when considering a job?

If you have decided on a yearly salary you want to make and find that it requires more education, will you be willing to get more education to attain your salary goal? Explain your answer.
Sharon is searching career possibilities. She found that an air traffic controller requires an associate’s degree and on-the-job training. The median salary is $122,530 a year in some parts of the country. She also found that a nurse practitioner requires a bachelor’s degree in nursing and a masters or doctorate in nursing. The median salary is $89,960 a year. In 20 years, how much more would an air traffic controller earn than a nurse practitioner?

Which of these two jobs do you think would be the most stressful? Why?

Which of these two jobs do you think would give the employee the most personal satisfaction or sense of accomplishment? Why?

Do you think that is important in a career choice?
